# Denali Remote Sales Transfer

## Computer Team Cougar Mountain Denali Remote Sales Transfer

### Background:

Many clients need to have sales take place outside of the traditional retail brick and mortar buildings. In many cases, it is not feasible to stay connected to the home office to create update and maintain sales and customer information, and this why we created the Denali Remote Sales Transfer takes your business to the next level.

Cougar Mountain Denali allows the users to process POS (Point of Sale) and sales orders in their sales modules. Both processes can run locally and remotely depending on the client needs. In either case, once you have completed the sales at the remote location, they need to be transferred back to the home office.

Our product takes care of that task. It allows you to run the Denali remotely and then update the home office with those newly created sales. It also gathers all the most recent information from the home office and puts back on the remote site.

### Features and Benefits Charts:

Feature	Benefit
<b>Remote sales processed anywhere in the world come back to the office with our software.</b>	1.) You can increase sales by visiting your customers yet still capture all the sales information you desire using the Denali.
<b>Performance is very fast.</b>	1.) We have not implemented multiple threads to take advantage of the new multiple core processors. 2.) We have updated the routines to only transfer the history changes rather than the entire file. One of our current users take about 40 minutes to update is now at 4 minutes.
<b>One program for both POS (Point of Sale) and order entry.</b>	1.) Our new release now supports both Denali solutions in one program. No need to install multiple programs.
<b>Detailed logs track every step of the updates.</b>	1.) You will now see what step the program is doing. 2.) We also give times, so you know about how long updates will take in the future.
<b>Increased protection for your remote data.</b>	1.) We now make separate backups of the data before each transfer to the protect the data. 2.) If there is an issue, we can restore to before any transfer for the last six days.

### New setup screen

The screenshot shows the 'Application Settings' dialog box with the following sections:

- Local SQL Server Connection:** Fields for SQL Server Address, SQL User Name, SQL Password, and Store Database Name. Includes a checkbox for 'Windows Authentication'.
- Main Office Remote SQL Server Connection:** Similar fields to the local connection.
- File Locations:** A 'Backup Path' field with a 'Browse' button.
- Per Computer License:** A note about contacting Computer Team, Inc. for a license, followed by 'License #' and 'ID Code' fields (ID Code is 441299138).

Buttons for 'Cancel' and 'Save' are at the bottom.

3.) We also keep six monthly backups as additional protection.

1.) Allows you to change the locations of both local and remote databases. If things change like server or workstations, it can be updated inside the program now.

1a.) Local SQL Server Connection is the remote workstation configuration.

1b.) Main Office Remote SQL Server Connection is remote to the workstation you are setting up and is the home office.

### Main Data Entry Screen

The screenshot shows the 'Remote POS Transfer' dialog box with the following elements:

- Statistics:** 'Invoices to Transfer: 48 Invoices', 'Last Full Update: Never', and a 'Status:' window.
- Action Buttons:** 'Send Invoices to Home Office', 'Full Data Update', 'Update Inventory Data Only', and 'Update Customer Data Only'.
- Footer Buttons:** 'Refresh', 'Settings', and 'Exit'.

1.) Main data screen. From here you can send and receive the data you desire.

2.) The status window will update the progress of the transfers.

3.) You can receive back full data both customer and inventory.

3a.) You can receive back only inventory data.

3b.) You can receive back only customer data.

### Customer Data Update Note

1.) Because of the method of updating if you wish to remove a customer, please do it on the remote workstation. Otherwise, the transfer will add the customer back in.

Current Unit Price: \$449.00 per workstation.  
 Upgrade Unit Price: \$229.00 per workstation

Please contact us with additional questions.
